**FOR IMMEDIATE RELEASE:**

**BPSI named Exclusive Master Distributor for the U.S. and Canada for the best in class Naebula™ Security Fog Intrusion Protection Machines to help protect against senseless acts of physical violence, theft and vandalism.**

**San Francisco, CA – May 11, 2016** – Building Protection Systems, Inc. ([BPSI](http://www.BPSI.com)) announced today that they have entered into an exclusive master distributor relationship for the U.S. and Canada of the best in class Naebula™ Security Fog Generation Machines. [Naebula™](http://www.Naebula.com) is a visual based defensive measure capable of blocking an intrusion before it turns into a robbery or violent exchange. Upon activation, a thick fog curtain is generated in seconds giving innocent employees time to flee and seek safe shelter as the intruders are forced to escape as the fog confuses their senses and virtually eliminates their line of sight. The fog generated is harmless and its composition is dry with zero trace residue meaning the Naebula™ can be deployed in virtually any venue or environment.

“This is precisely the type of forward looking protections that are needed in venues where high value merchandise is left unattended or places where the risk of violent robberies utilizing potential deadly force on unsuspecting employees is anticipated. They can’t steal what they can’t see and they can’t harm an innocent store clerk if they are nowhere to be found” said Greg Eiler, President at BPSI.

Some of the most frequent uses of the Naebula™ System are: Banks, Gas Stations, Convenience Stores, Neighborhood Liquor Stores, Jewelry Stores, Check Cashing Establishments, High End Merchandise Outlets and Supply Houses. Other larger networked uses of the Naebula™ System are for protecting large unattended warehouses of expensive goods, VIP Homes and critical office space as well as other uses where a diversion is required for a safe escape.

**Distributorship Opportunity**

BPSI is currently interviewing for local and regional distributorships that can handle installation and service tasks of the Naebula™ Systems. If interested, please visit [www.BPSIglobal.com](http://www.BPSIglobal.com) and complete a distributor contact page under the “New Offerings” tab. Additional technical information, datasheets, video and more are also located on the same page.

**About BPSI**

BPSI is the world leader in reliable automated toxin protection life-safety systems for public gathering spaces, mass transit stations, and buildings. Founded by building systems experts with over 30 years of infrastructure experience, BPSI's products are U.S. Dept. of Homeland Security SAFETY Act designated Qualified Anti-Terrorist Technologies (QATT) that quickly and reliably detect, identify and isolate toxic chemicals and radioactive isotopes in the air to protect innocent people and assets. More information can be found at [www.bpsiglobal.com](http://www.bpsiglobal.com) or 888-888-BPSI.
