FOR IMMEDIATE RELEASE:

BPSI creates new Zero-Cost Warranty for 4 years on all its Fixed Chemical Detection Systems.

Proven field reliability of their deployed Sentry One systems since 2008 spark the initiative.

San Francisco, CA – June 23, 2014 – Building Protection Systems, Inc. (BPSI) announced today that the company will provide a no-cost 4 year warranty on its US Department of Homeland Security designated Sentry One™ Chemical Detection Systems. This new 48 month warranty on the breakthrough equipment is unheard of in the detection industry. “After amassing millions of instrument hours with our systems installed in commercial office buildings and subway platforms and stations with no sensor issues, we chose to take the lead in providing a new warranty that guarantee the customer will have the lowest operating costs possible – Zero for 4 years,” said Greg Eiler, President of BPSI.

The new warranty covers BPSI's patented Chemical Sensor Array and PLC based Sentry One Controller (the brain). “Now users can install this technology worry-free,” said Mike Welden, VP of Homeland Security at BPSI. “Many of our competitors have always had an expensive detection engine replacement issue after 12-24 months that surprised the user with unforeseen costs. Now, BPSI users know that their equipment is proven reliable, is SAFETY Act Designated by the DHS and that BPSI covers them for a full 4 years.”

First deployed in commercial buildings in 2008, BPSI's Sentry One chemical detection systems have now been operating in excess of 1.8 Million instrument hours with Zero false alarms – unheard of in the detection industry. BPSI's Sentry One Systems are further deployed in the nation's largest Metro Rail Stations reliably monitoring the air and providing real time actionable data to security/life-safety teams. The Sentry One controller seamlessly interfaces with any building (or) automation management system to automatically activate the predetermined mitigation protocol while also feeding useable data wherever desired.

Safety Act Designation

BPSI's Sentry One Technology is deemed a "designated Qualified Anti-Terrorist Technology (QATT)" according to the U.S. Department of Homeland Security's U.S. SAFETY (Support Anti-terrorism by Fostering Effective Technologies) Act of 2002. The SAFETY Act is intended to provide critical incentives for the development and deployment of anti-terrorism technologies by providing liability protections for sellers and buyers of qualified anti-terrorism technologies. www.SAFETYAct.gov.

About BPSI

BPSI is the world leader in reliable automated toxin protection life-safety systems for public gathering spaces, mass transit stations, and buildings. Founded by building systems experts with over 30 years of infrastructure experience, BPSI's products are U.S. Dept. of Homeland Security SAFETY Act designated Qualified Anti-Terrorist Technologies (QATT) that quickly and reliably detect, identify and isolate toxic chemicals and radioactive isotopes in the air to protect innocent people and assets.
