FOR IMMEDIATE RELEASE:

The US Department of Homeland Security awards BPSI a 5-year extension of its SAFETY Act Designation for BPSI's proven Chemical and Radiological detection system platform.

Five years of deployed Building and Metro Rail Chemical and Radiological Dirty Bomb protection performance noted a huge success.

San Francisco, CA - October 10, 2013 – Building Protection Systems, Inc. (BPSI) announced today that the US Department of Homeland Security has awarded a 5-Year extension of BPSI's SAFETY Act Designation for its breakthrough next generation Sentry One™ toxin detection technology platform. "The Department of Homeland Security's extension is a clear indication of the trust in our technology that lives will be saved during certain acts of terrorism and as a result our customers will truly benefit from the extended SAFETY Act liability protections." said Greg Eiler, President of BPSI. The SAFETY Act of 2002 provides liability protections for suppliers, partners and upstream/downstream users of the SAFETY Act designated technology. The Act's purpose is to encourage adoption of such designated Qualified Anti-Terrorist Technologies (QATT) that are designed to preserve human life during certain acts of terrorism. BPSI's Full Designation is valid through 2018 with provisions to extend as needed.

First deployed in commercial buildings in 2008, BPSI's Sentry One chemical detection systems have now been operating in excess of 1.8 Million instrument hours with Zero false alarms – unheard of in the detection industry. BPSI's Sentry One Systems are further deployed in the nation's largest Metro Rail Stations reliably monitoring the air and providing real time actionable data to security/life-safety teams. The Sentry One controller seamlessly interfaces with any building (or) automation management system to automatically activate the predetermined mitigation protocol while also feeding useable data wherever desired.

Safety Act Designation

BPSI's Sentry One Technology was originally deemed a "designated technology" in June 2008 according to the U.S. Department of Homeland Security's U.S. SAFETY (Support Anti-terrorism by Fostering Effective Technologies) Act of 2002. The SAFETY Act is intended to provide critical incentives for the development and deployment of anti-terrorism technologies by providing liability protections for sellers and buyers of qualified anti-terrorism technologies. www.SAFETYAct.gov.

About BPSI

BPSI is the world leader in reliable automated toxin protection life-safety systems for public gathering spaces, mass transit stations, and buildings. Founded by building systems experts with over 30 years of infrastructure experience, BPSI's products are U.S. Dept. of Homeland Security SAFETY Act designated Qualified Anti-Terrorist Technologies (QATT) that quickly and reliably detect, identify and isolate toxic chemicals and radioactive isotopes in the air to protect innocent people and assets. More information can be found at www.bpsiglobal.com or 888-888-BPSI.
