BPSI Produces System for Containment of Building-Targeted Terrorism

San Francisco, California – July 25th, 2006 – Building Protection Systems, Inc. (BPSI) announced today that it has successfully produced and tested the first to market system for monitoring, detecting and containing airborne toxins in large commercial buildings. The announcement comes as BPSI enters discussions with two premiere REITs for a pilot program to introduce Building Sentry One, BPSI's innovative contaminant prevention system, into the Class A Commercial Office market.

The Building Sentry One system brings together proven technology with state-of-the-art application, in a system with total install costs at a fraction of competing approaches to building protection. "I'm extremely proud of the efforts of our team of R&D staff," said John Oliver, Vice President of Corporate Development. "They've surpassed my highest expectations. This is going to alter the landscape within the Class A Commercial market. We've just launched a product that will at once make premiere properties much safer for tenants, owners and insurers."

About Building Protection Systems, Inc.

BPSI is the leading provider of building-based contaminant intrusion prevention systems. The Building Sentry One monitoring and containment system is a breakthrough technology that makes prevention of building-targeted terrorism a cost-effective reality. Our innovative approach offers customers unmatched prevention and containment at the local level, with unrivaled economics, ultra-high performance, scalability and reliability. BPSI is based in San Francisco, California and can be contacted through its Web site at www.bpsiglobal.com.
